

AI readiness checklist

Use this before committing to an AI workflow. It is an indicative self-assessment to structure a conversation — not a diagnosis or a validated maturity score.

Rating guide: 1 = not ready (blocking gaps) · 2 = needs preparation · 3 = ready to design a workflow.

Business value

- Which recurring work would matter most if it were faster, more consistent or better reviewed?
- Who owns that outcome, and how would they recognise an improvement?

Workflow

- Are the steps, inputs, outputs and handoffs written down?
- Do you know the common exceptions and who handles them?

Data & knowledge

- Is there one approved source for the facts the work depends on?
- Who may access that data, and is consent in place where needed?

Systems

- Which systems does the work touch today?
- Would an export be acceptable at first, or is a direct connection essential?

People

- Who will review AI-prepared work, and do they have the time?
- What training would reviewers and operators need?

Governance

- Which decisions must always stay with a named person?
- How will you record approvals, rejections and exceptions?

Area	Rating (1–3)	Evidence / notes	Owner
Content production (SAMPLE)	3	Approved facts list exists; brand manager reviews weekly	Brand manager

What to bring to a first conversation

- A list of 5–10 recurring workflows
- The owner of each workflow
- Examples of good and poor outputs
- Current policies on data and AI use
